## History [edit]

Website www.wandisco.com The name WANdisco is an acronym for wide area network distributed computing. Initially offering a replication solution for distributed teams using the Concurrent Versions System (CVS), this was expanded to include Apache Subversion with SVN MultiSite Plus in 2006, Git with Git MultiSite in 2013 and Gerrit with Gerrit MultiSite in 2014.

Big data

In 2012, WANdisco acquired AltoStor, and entered the Big Data market with its Non-Stop Hadoop product. AltoStor's founders, Dr. Konstantin Shvachko and Jagane Sundar, joined WANdisco as part of the acquisition, and helped develop the company's next generation

Evernote customers in particular may experience they now have extra motivation to create the change.. These and other improvements provide compelling factors to migrate fróm a rival noté-taking platform, especially if you've happen to be having to pay for the privilege.

Apple company's stock Notes app offers come a lengthy way since it first made an appearance on Mac, with security password protection, tables, and record scanning becoming simply a few of the best functions it offers obtained in recent yrs.
